# ATM-grade VSAT Networks

Matthias Gerlich

Air Traffic  
Management

# Frequentis VSAT services for safe & secure communications

## Frequentis implementation and services

### Network Management

Deliver end-to-end application view with active measurement of performance

→ ATM application view

### NetBroker: ATM-grade router

Ensuring ATM-grade performance and enhancing network capabilities

→ Application based routing and brown-out detection

### VSAT network integration

Delivery of ATM-grade VSAT networks with VCX-IP

→ supporting all types of applications: G/G, A/G, AMHS, AFTN, Remote Tower,...

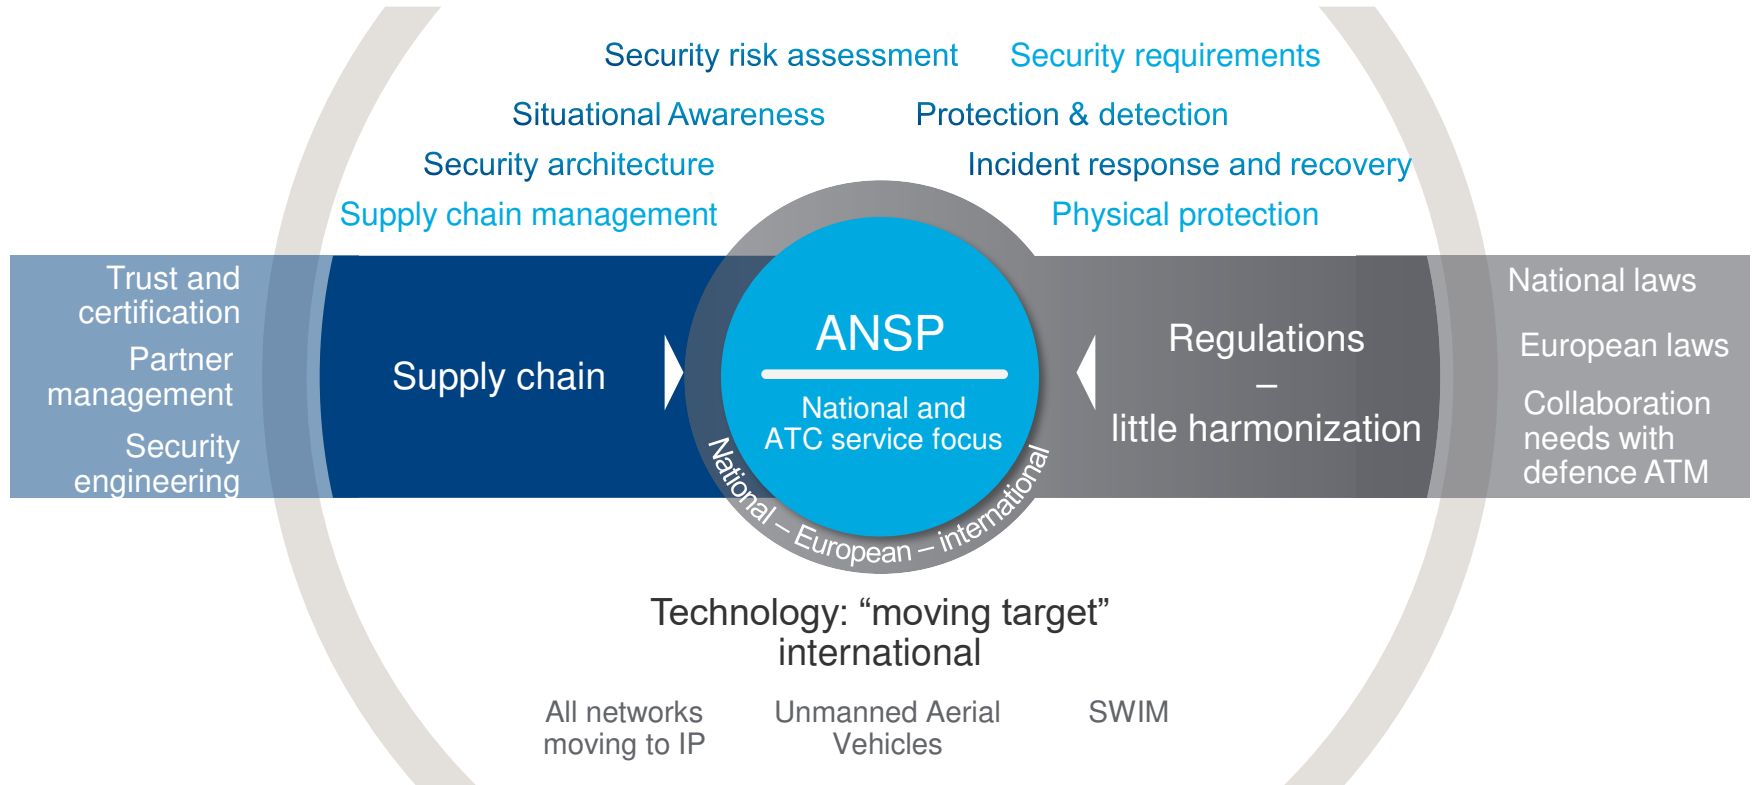

### End-to-end safety & security view

# Safety and security need to go hand in hand

# A challenge requiring expertise and collaboration of the industry

Cyber crime is more and more a high-tech business

# Create user networks at the Edge

## Characteristics of an ATM-grade VSAT network

### VSAT network as IP based transport layer

- Main path or complement as redundancy to other technologies
- General purpose L2/L3 access ports (switch/router) for data

### VSAT ATM-grade enhancements

- VCX-IP application gateway
  - Ensuring bandwidth savings through domain specific functionalities (on top of voice compression)
- Legacy interfaces where still needed (E&M, FXS/FXO, serial, ...)
- NetBroker
  - Flow-based and SLA-based re-routing
  - Deterministic methods that allow a safety case
  - Safety based bandwidth calculation models reducing OPEX

VSAT ATM grade networks support intra-airport multiservice connectivity and high capacity operational networks

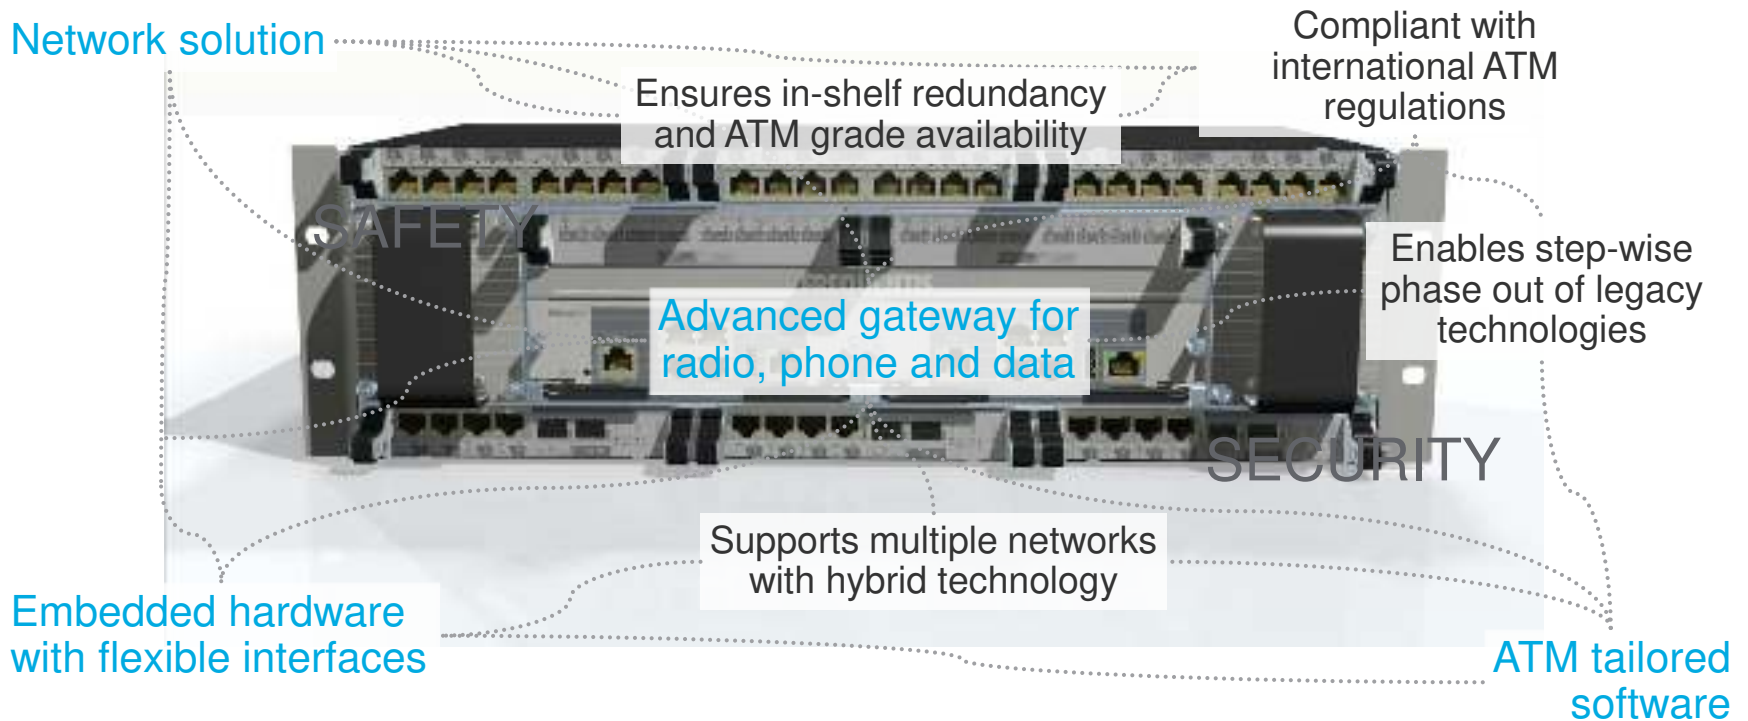

# Enabling transition of safety-critical voice and data applications to IP networks

# VCX-IP network solution

... what is it?

## Network solution

# Enabling safety-critical voice and data applications in a non-deterministic network

The market leading network solution for safe migration to VoIP in air traffic management

## Optimizing ATM applications

- ATM grade bandwidth optimization
- Dynamic delay compensation
- Echo-free side tone

## Advanced voice & data gateway

- Supporting legacy and IP standards
- Following ICAO/EUROCAE ED-137 regulations
- Providing physical and logical protocol conversion

**VCX-IP**

## Safety by design

- Inter-shelf redundancy for hardware, software, and configuration
- Redundant LAN access of each processing unit
- ED-153 compliance
- Zero down-time for configuration changes
- Admission control
- Pre-emption rules for shared access to resources

+

# VCX-IP network solution – more than a gateway

ATM-grade solution for safety-critical voice and data applications – from legacy to all-IP

Echo-free radio communication

Protecting legacy investment

+

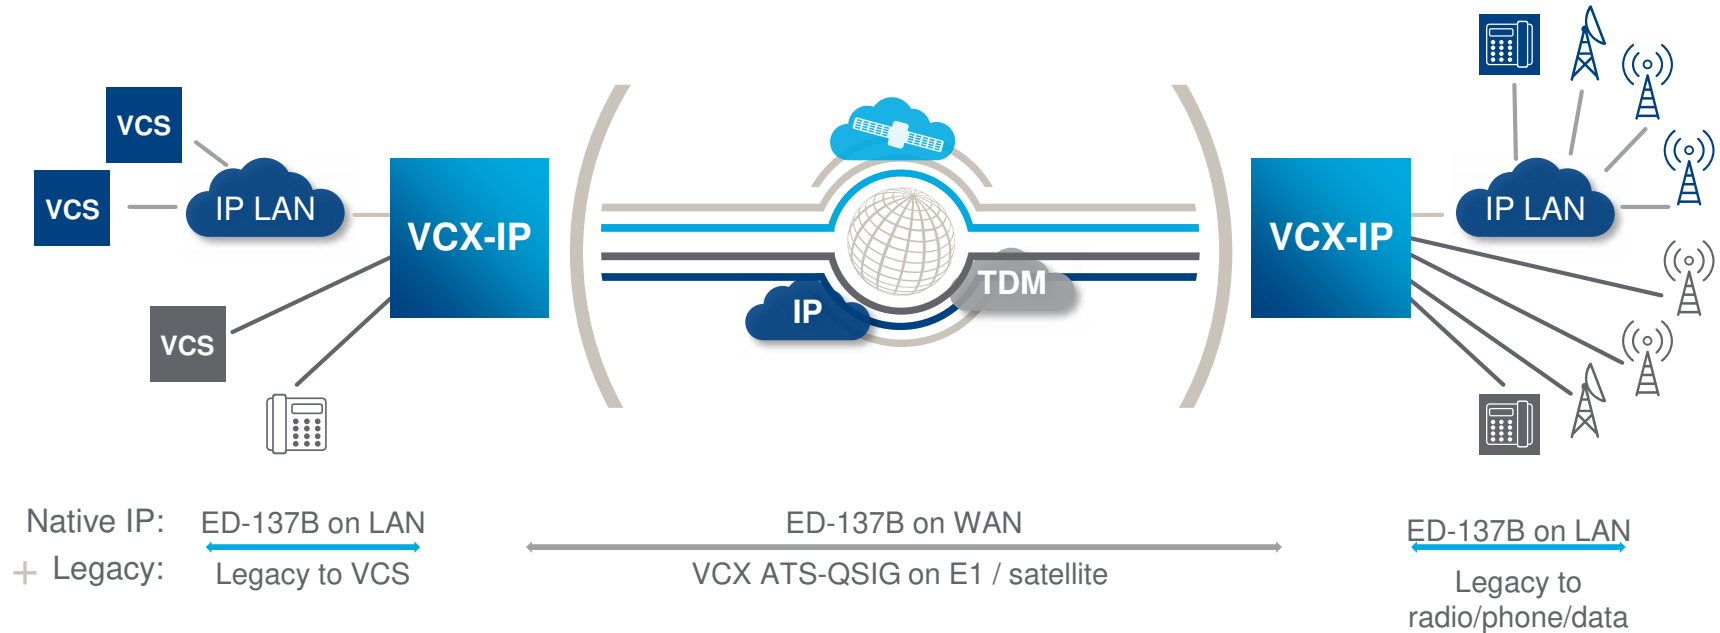

Highest availability  
Uninterrupted operations  
Optimized bandwidth usage

Redundancy  
Hot-pluggable interfaces

Admission control

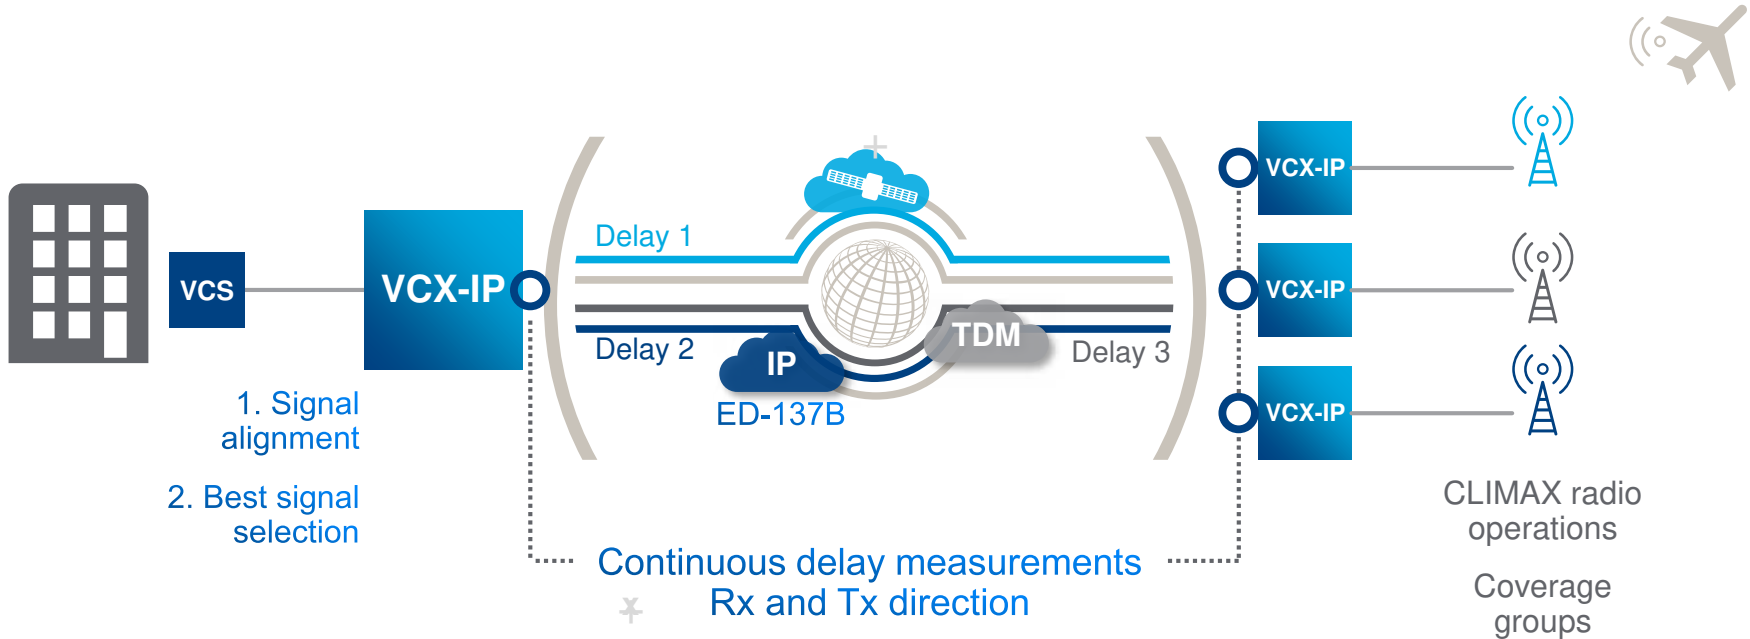

# Enabling legacy equipment for the cloud era

Protect your investment by step-wise migrating to an all-IP environment

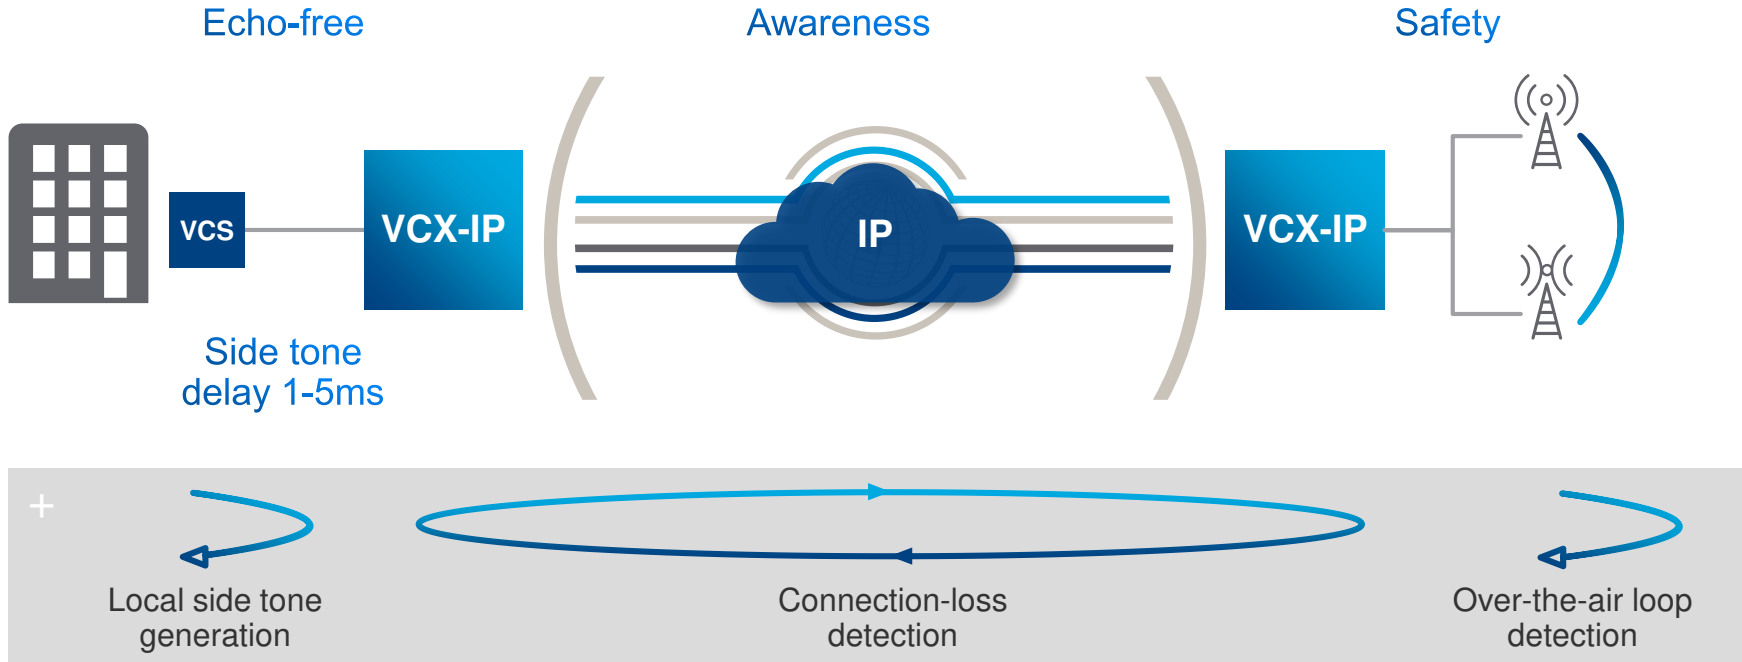

# Bi-directional dynamic delay compensation over any WAN and in any combination

Best signal selection based on synchronized audio receptions

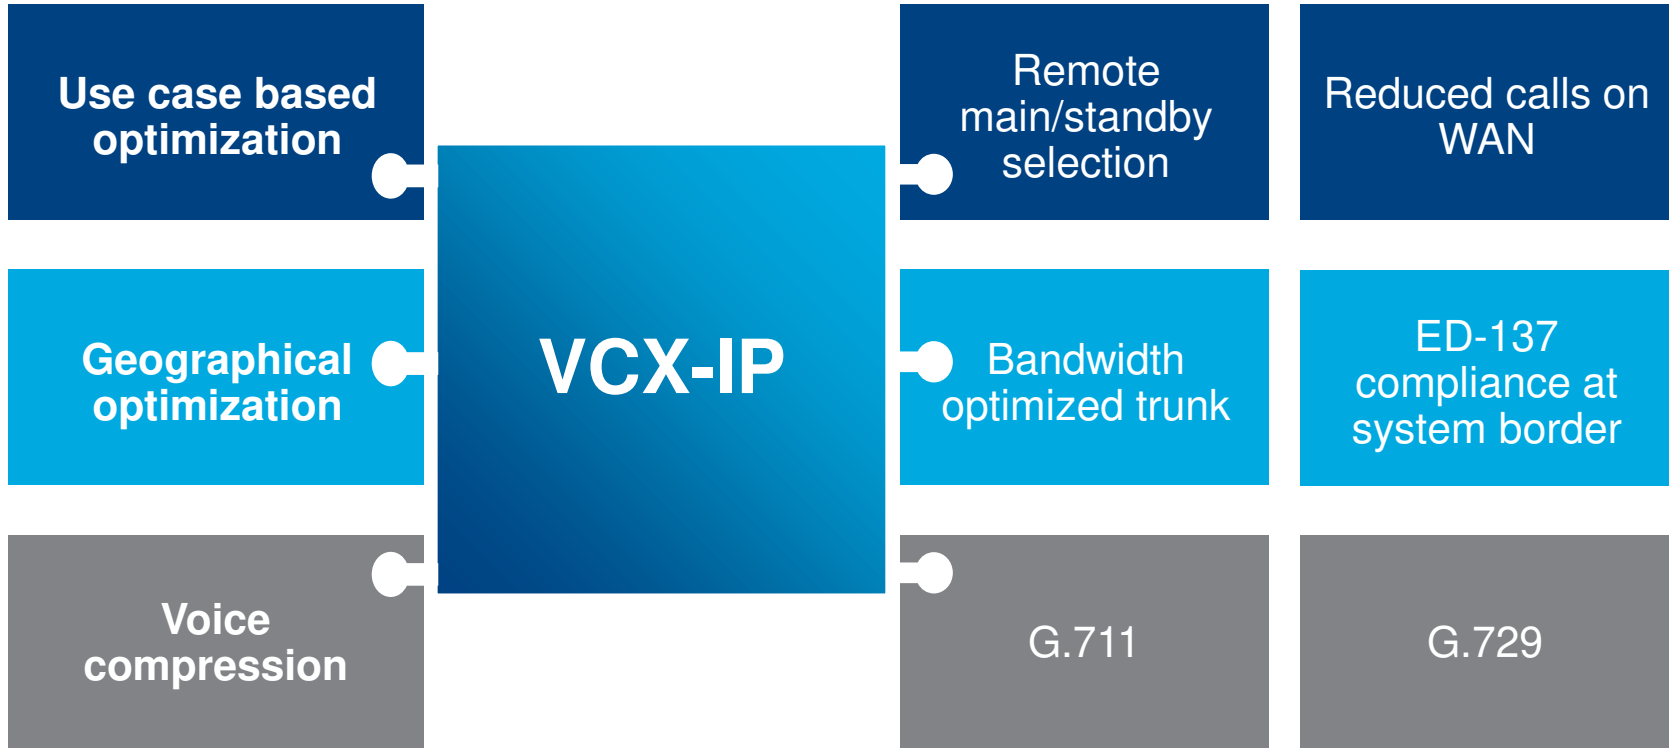

# Elimination of echo in higher delay networks

Local side-tone generation with remote loop check

# ATM grade bandwidth optimization

Flexible and safe cost saving potentials

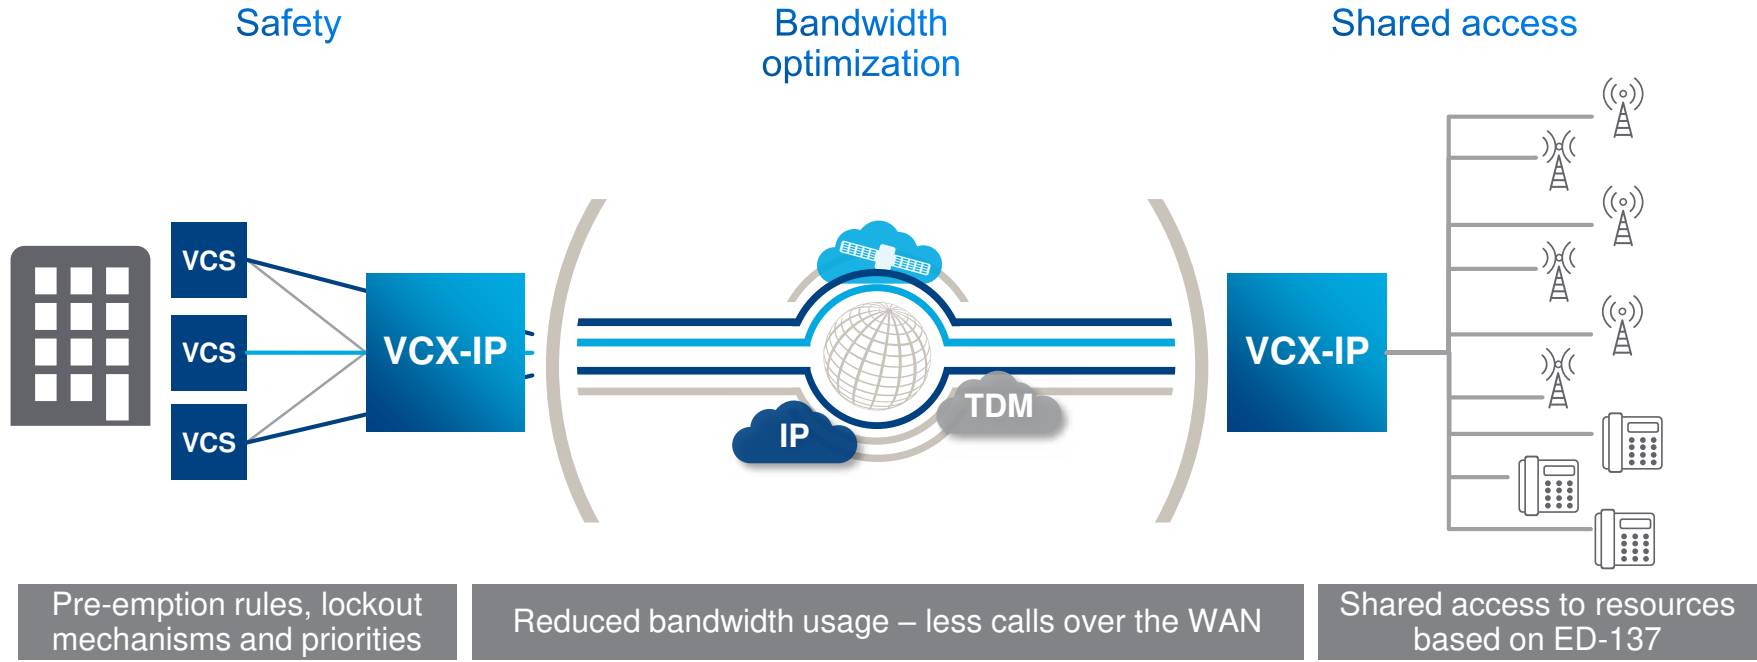

# ATM grade bandwidth optimization

Use case based optimization: Main/standby switching at the remote site

# ATM grade bandwidth optimization

Use case based optimization: Reduced calls on the WAN

# VCX-IP network solution

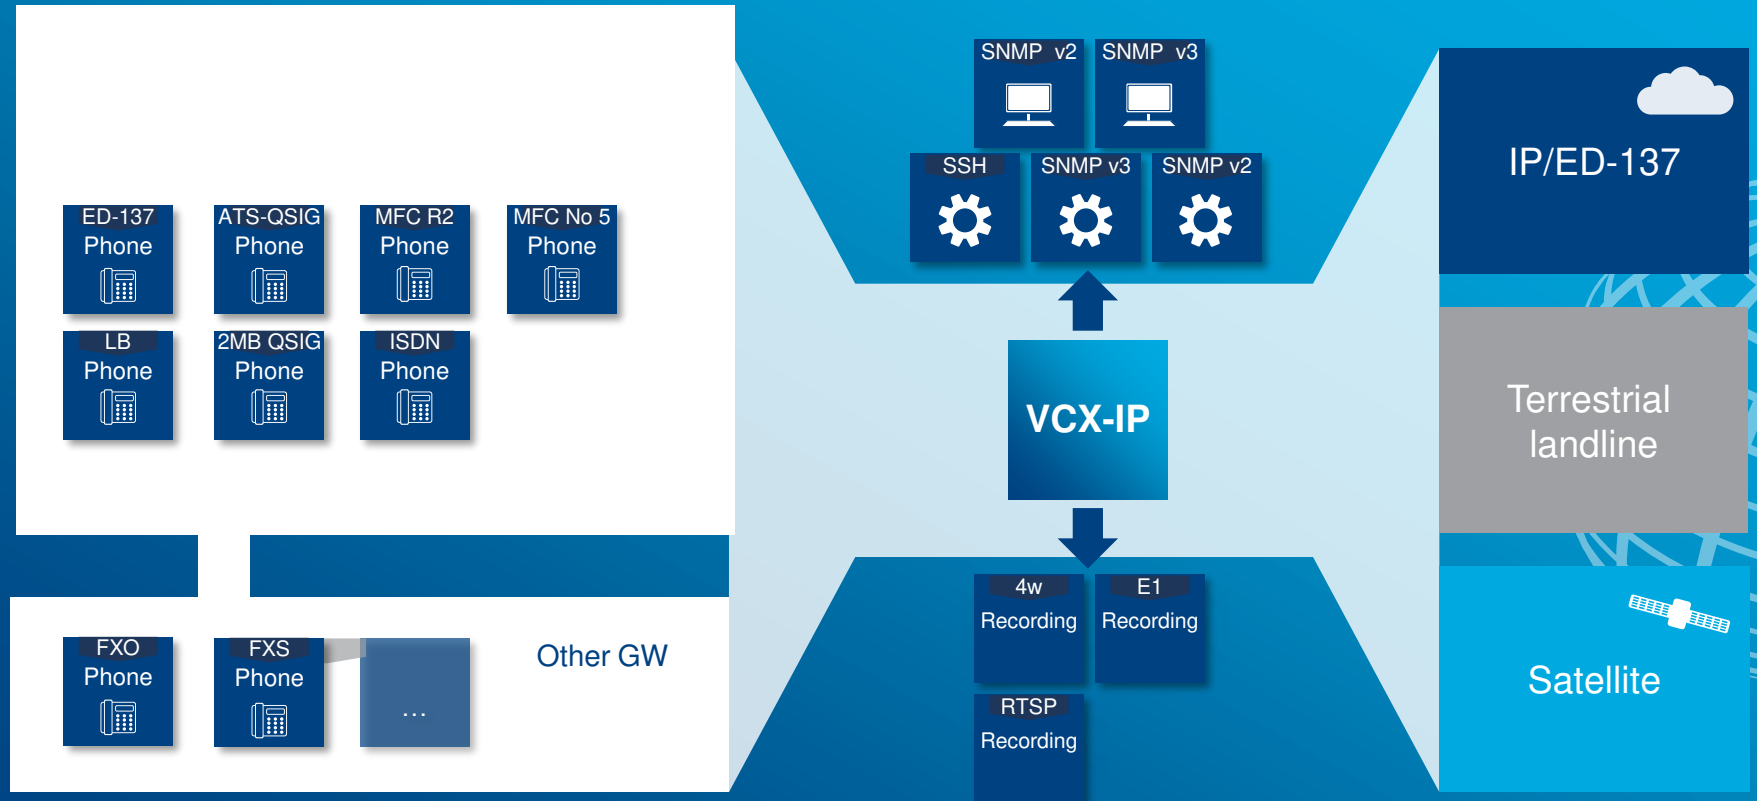

## Overview of phone capabilities

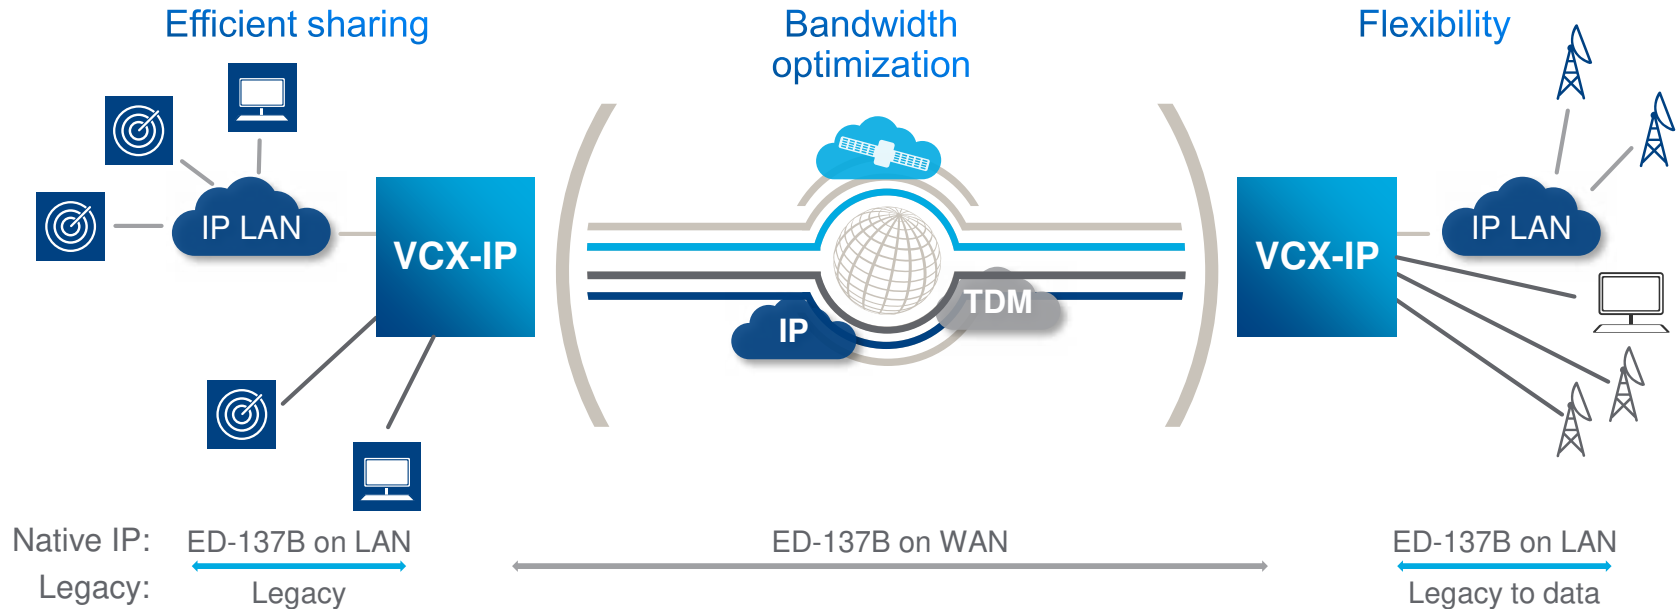

# VCX-IP phone protocol and interface gateways

## Services independency from physical end-point interfaces

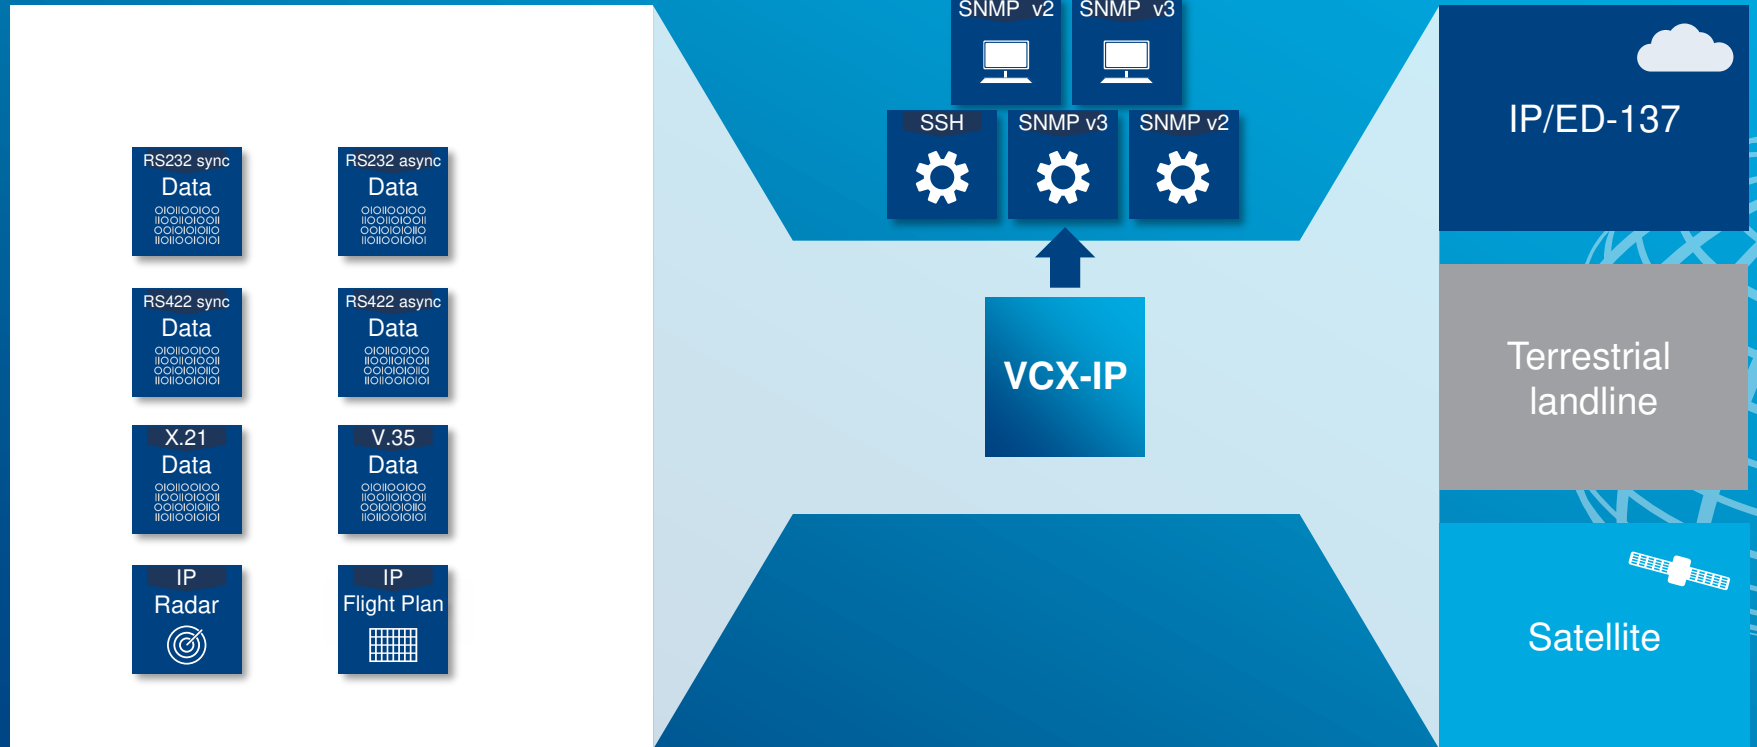

# VCX-IP network solution

## Overview data capabilities

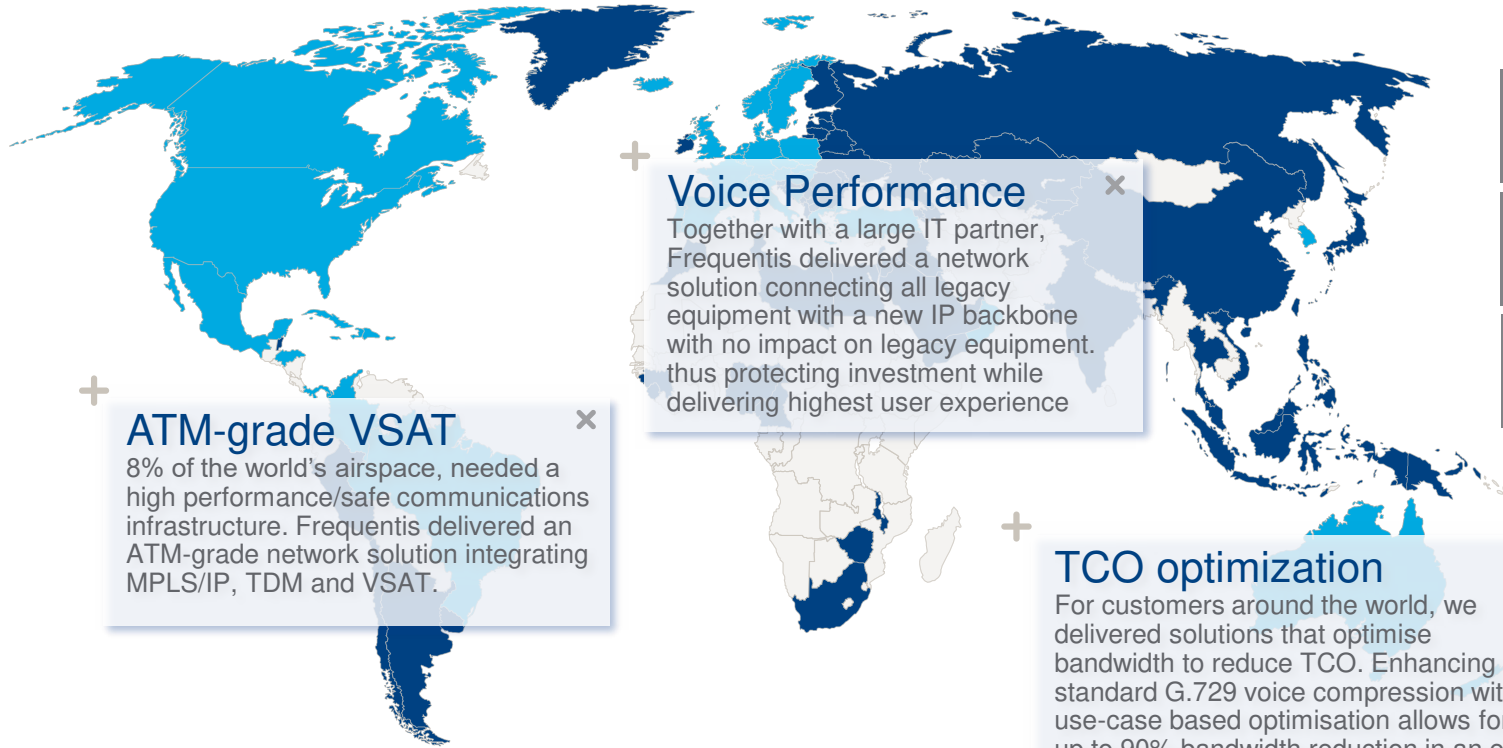

# VCX-IP data protocol and interface gateways

## Services independency from physical end-point interfaces

# High performance, safety and security

## Networks

250,000  
connected users

50+  
countries of the world

33%  
of land mass connected by  
Frequentis network solutions

ATM Civil  
Networks

**ATM-grade VSAT**  
8% of the world's airspace, needed a high performance/safe communications infrastructure. Frequentis delivered an ATM-grade network solution integrating MPLS/IP, TDM and VSAT.

**Voice Performance**  
Together with a large IT partner, Frequentis delivered a network solution connecting all legacy equipment with a new IP backbone with no impact on legacy equipment, thus protecting investment while delivering highest user experience

**TCO optimization**  
For customers around the world, we delivered solutions that optimise bandwidth to reduce TCO. Enhancing standard G.729 voice compression with use-case based optimisation allows for up to 90% bandwidth reduction in an end-to-end ED-137B voice call.

# Enabling safety-critical voice and data applications in a non-deterministic network

The market leading network solution for safe migration to VoIP in air traffic management

## Optimizing ATM applications

- ATM grade bandwidth optimization
